

**THE NEW BULLSEYE™ LASER  
DRIVEN EXTINGUISHER  
TRAINING SYSTEM:  
CLEAN, SAFE & EFFECTIVE**

**Train where fires may  
actually occur.**

The BullsEye system is the most innovative fire training tool on the market. The BullsEye utilises digital flames to simulate class A, B and E fires. It senses where the user aims and sweeps the laser training extinguisher and automatically varies the LED-driven digital flames in response.

The new BullsEye system can recognize which type of extinguisher a trainee is using, and will only respond to the trainee's actions if they have chosen correctly. Also, the trainee must put the correct distance between themselves and the fire for the panel to respond. These added features make fire extinguisher training more realistic and effective than ever before, resulting in trainees who are well prepared to face incipient stage fires.

Training can now take place completely indoors - from the conference room to the production floor.

**CONNECT AND COMBINE WITH WIFI**

Two other new features that further contribute to the system's realism are sound effects and smoke generation.

Through WiFi connectivity, the BullsEye can work in conjunction with a HAAGEN smoke generator to produce an accurate amount of smoke for each fire scenario. Instructors can control the smoke level manually or allow the system to determine the appropriate smoke level. Instructors can control the new BullsEye by either an infrared wireless remote or the optional tablet. Training records can be collected and exported to track the performance of the trainee.

Unlike many other extinguisher training systems, training with the BullsEye can take place in any setting, indoors or out. Life-saving fire extinguisher training can be provided to hundreds of participants in a single day. Trainees learn how to effectively use a fire extinguisher without the cost and clean-up associated with using dry-chemical or CO2 extinguishers.

**BULLSEYE FEATURES:**

**Clean Training**

BullsEye uses a conical laser to replicate extinguisher discharge rather than depending on a dry-chemical or CO2 extinguisher. As only laser light is emitted from the training extinguisher, extinguisher training can now be conducted virtually anywhere. The BullsEyes' digital flames also respond to HAAGEN's compressed air and water SmartExtinguishers for additional training variations.

**Safe Training**

The BullsEye utilises LED driven digital flames and a laser training extinguisher to provide a dynamic and realistic simulation for trainees while eliminating the hazards associated with conventional fire extinguisher training.

**Effective Training**

The BullsEye simulates class A, B and E fires at variable difficulty levels and has the capability of grading trainees on their performance. Hundreds of trainees can be trained in a single day without recharging any extinguishers.

**NEW FEATURES:**

- > Integrated sound effects
- > Integrated smoke generation
- > WiFi
- > Wireless IR remote control
- > Extinguisher type recognition
- > Extinguisher distance sensing
- > Training record collection

**EXPERIENCE THE NEW BULLSEYE**

Experience for yourself how the new BullsEye can make your fire extinguisher training an enjoyable experience and much more effective and call +44 (0)1527 888 960 for a demonstration.

**Find out why**

Thousands of organisations, universities, hospitals, fire departments and government agencies are using HAAGEN simulators. For a demonstration video and more information: call +44 (0)1527 888 960, online at [www.haagen.com](http://www.haagen.com)
