

## CHALLENGE TRAINEES TO OPERATE IN LOW VISIBILITY

**Add the challenge of low visibility to any training scenario with the Misty Blindmask.**

From emergency evacuation training for employees to hands-on fire rescue training for firefighters, Misty helps your trainees learn to operate comfortably in smoke filled conditions. With the handheld controller, the instructor can vary the visibility from perfectly clear to near black-out conditions while having a clear view of the training exercise. Trainees learn to adapt and stay calm in challenging emergency situations.

The instructor unit and student units are linked via wireless communication. Using the handheld instructor unit, the trainer can determine and dynamically adjust the level of visibility experienced by the students. The system includes six different radio channels, allowing a maximum of six groups (12 students) to train in the same location.

## FEATURES

### How the Misty Blindmask Works

Each Misty Mask has a built-in film that can be varied from clear to completely opaque. With the instructor unit, the desired visibility is selected for each mask. A wireless signal is then sent to the student unit and the mask visibility is instantly changed. The instructor controller displays the visibility for each mask allowing the trainer to keep a clear view on the scenario.

### Versatile

- > Misty is designed to fit directly over SCBA masks or can be worn without a mask.
- > Train with “smoke conditions” in areas where use of a smoke machine or live fire isn’t possible.
- > Set the visibility of each mask manually or select automatic mode, which constantly varies the visibility.

### Realistic

- > Teach trainees to stay-low for better visibility by varying the smoke settings.
- > Reduced visibility settings don’t only limit the amount of light to pass through, but closely simulate heavy smoke conditions.

### Safe (Instant Off)

- > Trainees can clear the mask at any time with an emergency stop button. After an emergency-stop, the unit alarms and sends an alert to the instructor’s controller.
- > The instructor can clear all masks at any time with the “all clear” button.

### Misty Blindmask Package

The Misty package includes the instructor’s control unit, two Misty Blindmasks, a charger for the built-in rechargeable batteries and a rugged transport case with custom foam cutouts for all components.

## TRAINING OPPORTUNITIES

### Evacuation Training

- > Train employees to find exits, practice emergency action plans in a smoke filled environment.
- > Combine Misty with FS box, flame projector, or other incident simulation products to create enhanced training scenarios.

### Initial fire response training

Quickly create initial fire response scenarios by combining Misty with HAAGEN’s incident simulation props.

### SCBA training

Challenge trainees to operate in low to zero visibility conditions without limiting the instructor’s ability to observe the training session.

### Find out why

Thousands of organisations, universities, hospitals, fire departments and government agencies are using HAAGEN simulators. For a demonstration video and more information: call +44 (0)1527 888 960, online at [www.haagen.com](http://www.haagen.com)
